

Design And Build A Treehouse

Material:

- Popsicle Sticks
- Recycled Paper Products
- Legos
- Various Items Around The House (With Parent Permission)

Objective: Explorers will get to be architects for a day and design their own miniature treehouse

Lesson:

What is an architect? An architect is a person who designs a variety of structures. This includes houses, apartment buildings, and a multitude of other permanent structures. For this project we will focus on building a treehouse in the Amazon rainforest!

Explorers will need to draw out their design on a piece of paper and keep in mind different rooms one might need in order to survive. Example: kitchen, bedroom, bathroom, etc. Then, they can take their supplies and begin to build a small replica of their design.
